"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

By LINA ORMAN COOPER, Author of "We Wives," etc.

PART I.

THEIR CLOTHING.

SOME months ago I was privileged to write a short series of articles for the "G. O. P." on "Queen Baby and her Needs." In this fresh course I want to give advice to mothers and guardians upon the culture and care of the girls when she has passed a few more years of her life. To be called upon to rear daughters of the King, for the King is our high vocation, there is nothing common or mean about the task. What we "grown-ups" need is not an electrolyte mind, thinking that every girl must do just what every other girl ever did. But an open intelligence, ready to see good in new things if the good be there.

It is wonderful how the movement for rational dress has spread over England. Our daughters no longer go about with the cavity of their lungs exposed, or the delicate forearm uncovered. We no longer care for tricks in the matter of stockings and kid shoes. We have learned that strong boots need not be clumsy. Woolen dresses need not necessarily be ugly, or warm stockings coarse. Still, as it was nearly 3000 years ago, so we are even now very particular about the frocks, it is a great relief to find the Englishwomen of the present day actually stopping the growth of heart, lungs, liver, and other vital organs, in needlework, or "embroidery," is still the thing we like to give our girls. Daintiness in all "within" is what we appreciate.

Now I consider "daintiness" consists really in absolute purity and fitness. If we would preserve health, we must not only think of the prettiness of our children's clothing, but of the adaptability of that clothing to the laws of hygiene. It is one thing to be dressed, it is quite another thing to be clothed. Here it is necessary the "wrought gold" of wisdom, and experience, and common-sense.

In perfect health the little bodies we tend maintain a certain degree of heat. Therefore the purpose in clothing them is to keep that naturally equable temperature. In our very changeable climate, great discrimination is needed in changing the garments to meet the varied weather. It is well understood now that heat as well as cold gives a chill—that overheating is almost as unwise as under-clothing.

To my mind it is no more unwise to lighten the dress on a warm day, than it is to wear a waterproof on a wet one.

"Button to chin, Till May be in, Head on the knee, Till May be out," is one of those half truths that lead many astray. We should avoid bathing our little ones in perspiration, even if we are only in the fifth month of their life.

Now, our object being to keep an equable temperature round our little girl's body, how can we best succeed? I answer decidedly—

"as science has so often answered before—" by dressing the child in wool."

The clothing of our children should be as light as possible, as warm as possible, as cool as possible. Wool alone will work the miracle. So the first garment our sixteen-year-old girl should don must be a woolen one.

There are a great many most hideous combination garments sold that in no wise carry out the idea of "fine needlework." I would not disfigure the most beautiful thing in nature, viz.: a girl-child's white form, by putting any such thing about her. But delicately-woven white Sheeland woollies can be bought nowadays that are daintiness personified, and yet obey all rules of health. Some white woolen linen, laced round the neck, and half sleeves, add a touch of refinement. This combination garment should button on the shoulder, not down the chest, and should cover the thighs.

Over this gorgeous envelope, a corslet should be buttoned. No bones must be allowed in it. On this matter I feel very strongly. We are dreadfully shocked at the rudeness of Chinese mothers in binding up their children's feet to prevent growth. Yet—can it be believed? I have seen little soft-soled boots—belonging to girls of seven—encased in buckram and whalebone! one foolish mother actually pinching the waist, to make her child "grow up a good figure." We are right in condemning the Chinese mother. But how humiliating to find Englishwomen of the present day actually stopping the growth of heart, lungs, liver, and other vital organs, in this fashion.

The bodices I recommend should be made at home of strong white corded cotton, or at least knitted to shape in wool by clever fingers. I give a diagram (Fig. 1). The buttons at the waist-line, or over the hips, are for supporting the drawers and petticoats which follow.

One petticoat of flannel and one of cambric is sufficient. Both take considerably less stuff than similar garments for a younger child.

The under one should be trimmed with woollen lace, or mitred in this fashion (Fig. 2). The edges buttoned with flourishing flax, and the small apart satin-stitched with the same. As flannel shrinks in the wash, a large tuck must be put in at first, the sewing thereof masked by berring-bone in the floss thread mentioned above.

A mother's love for fine needlework and many tucks may be displayed in the white petticoat. It should be made very full, neatly gauged and gathered into a bodice of the same, trimmed with insertion and edged with frills of taffeta (Fig. 3). The bodice should button at the back.

The drawers worn by our little daughter should be equally beautiful. Valencienne makes a pretty flilling above the knee, or Cashse's cambric flilling looks well. Let the leghole be cut amply large and plenty of room for kicking about and running.

The frock or overall will be, of course, always a matter of taste. But as long as possible, let it be white. No other colour is as suitable for the King's daughters. The King has recognised this Himself, we say it with all reverence (Eccles. ix. 8.). His Son wore a white and seamless robe here (Luke iv. 29.), as a type of the "righteousness" which gift Him about (Rev. xvi. 5.). A beautiful legend concerning Him tells of the glistening atmosphere which moved with Jesus of Nazareth wherever He went. Some such atmosphere we should try and create round our girls, and, as we can then begin with the white dress, though we must not stop there. Snowy raiment will one day be given them by their Heavenly Father (Rev. vii. 14.). Let us imitate Him example even here. I have given diagrams for some of the under-clothing, but will not venture to sketch frocks for the King's daughters. Something loose and light and warm and white is all I counsel.

There are reasons, however, that are unsuitable for petticoats proper. Romp hours and play hours; hours at the seaside and hours on the bicycle have to be provided for. The other day I was watching gymnastic exercises in a large high school for girls. I could not but be struck by the utility, fitness, and—yes—beauty of the costumes worn. In these garments, tall girls and short girls, fat girls and thin girls, all looked equally well. In them, too, they were able to vault, and leap, and climb, and swing, as freely and agilely as young monkey's.

This costume consisted of two garments only. Full trousers reaching to the knee of blue serge, and a tunic reaching just beyond. I then and there resolved that when I next have children of from six years old to twelve to dress, I would adopt some such plan, at least, when at the seaside or during scrambling holidays. The trousers I should make from two straight pieces of, say, white serge. Before being put into the band this would be their shapelessness, I cannot call it shape (Fig. 4).
When put on to one of the vorwork bands and gathered in at the knee they would look like this (Fig. 5).

The tunic should be full, very. Buttoned at wrist and throat and reaching just below the knee (Fig. 6). A wide sash of scarlet or blue would brighten the white dress and be tied in a big bow at the side. All would be surmounted by a woven cap of corresponding colour. Warm stockings would reach the drawers and be suspended to the under-bodice, whilst square-toed, low-heeled pinet shoes would complete the outfit.

What a happy life we our King's daughters would live if thus habited. They could do all their brothers attempt. They would grow as young trees grow.

I have only just touched on the footgear. But perhaps that part of our children's clothing is the most important of all. No stockings grown too small should compress the pink toes; no boot too short. Both stockings and shoes should be changed every evening and clean ones given every twenty-four hours. I think a preventable hardship is often inflicted on young girls by having to wear heavy boots. We should be careful that they should be watertight, fit easily, and yet be light. Of course for such bottines we shall pay more than for clumsy ones. The price is generally in inverse proportion to the weight. Pinet boots and shoes seem to be expensive. But they are not so in the long run. Those seemingly delicate brogues are made of the best seasoned and toughened leather, and defy wet and weather.

Stockings in the winter-time should be hand-knit ones. They can always be refitted when necessary, so are really most economical in the end, and let them be worn when the heel comes under the foot. Much suffering and some deformity may follow the use of such shrunken things. The toes are meant to grasp the ground and greatly assist locomotion. If they are cramped up, they cannot, of course, do this, and are practically useless. Then the child walks on her heels, and her "carriage" is spoiled.

The King's daughters should be taught that dress is quite a secondary consideration. Health and not appearance should be our first consideration. But in the matter of hats and bonnets a little latitude of taste may be allowed. The covering of our heads is to protect and shield. It should therefore be light and warm and ample. If bonnetting is preferred, very simple, plain bonnets of silk can easily be made at home. Take a piece of buckram or brown paper about three inches wide; cover it with silk and let it frame the sweet face and cover the little ears. Then fasten a pointed piece of silk as a crown into it (Fig. 7). The point of the slip will give a nice raised appearance and should come just in the centre of the forehead (Fig. 8).

The bag of silk should be lined with muslin, and the whole fixed on the head with a bow of ribbon tied under the soft chin. Very winsome will look the little face peeping out of this Quaker affair, and it is so soft that no amount of hard usage can hurt it.

The outdoor cloak to match this bonnet should be in the Kate Greenaway style. Made of vicenza or serge and trimmed with fur with muff to match, the King's daughter will be able to defy all weather, especially if gaiters be drawn over her shoes and buttoned up to her knee.

I must confess to a serious weakness in the matter of night-gear for our girls. The traditions of our white-oak maidens still linger in my heart and practice. However, under the wide collared cotton dress, a woollen vest with sleeves should be worn in the winter, and if our daughters suffer from cold feet, double lambswool night socks are permissible.

If any one is strong-minded enough, however, flannel is the most agreeable for wearing at night, or colored flannel garments can be made quite as pretty with frills of the same embroidery or tucker lace. Only see to it, that the nightdress is long enough to tuck round the dimity feet when in bed, and to cover them modestly when out of it.

A dressing-gown is a sine qua non for our girls. I do not give a pattern—but advise wool in winter and some pretty quaint chintz for summer wear.

Shoes for the bath-room should stand beside

![FIG 7](image)

this dressing-gown. They can be made at home of bright-coloured felting to match (Fig. 9).

Cut them after this fashion, join the two strips at the heel. Turn inside out, sew to a felt sole, and return to proper side. A device in silks may be worked on the toe or a rosette of ribbon put there.

These shoes are necessary, as one of the worst things for growing girls is to chill their feet. Standing on bare board or cold oilcloth has often led to lifelong suffering.

If you follow the simple directions I have given you, I think you will find the King's daughters entrusted to you, if not actually glorious will be very comfortable within, and in the matter of myth, shoes, and costume, modern equivalents may be found in sachets of sweet scents kept amongst the girls' garments. It encourages individuality to let each child have her own particular scent. "Sweet violet" for a Violet, Lily of the valley for a Lilian, etc. In such little matters as these a mother may much help her daughter in love for the beautiful and good. No tawdry ornaments should ever be allowed the King's daughters. No sham jewellery. No falseness of any sort. The keynote to be struck in

these young lives is sincerity and truth. Fair because the beauty of the Lord their God rests upon them. Well-dressed, because clothed with humility and good works. In the ivory palace of youth we would fain have them as the polished corners of the temple, bright, steadfast and grounded in love.

**Slaves in England in 1771.**

In the Gentleman's Magazine for November 1771 we find the following paragraph—

"At a late sale of a gentleman's effects at Richmond a negro boy was put up and sold for £32. A shocking instance in a free country."

There was a growing feeling however against slavery in those days, as it apparent from the comment made by the writer of the paragraph on the sale.

**Be Charitable.**—The true way to gain influence over our fellows is to have charity towards them. A kind act never stops paying rich dividends.
THE GIRL'S OWN PAPER.

then lifting their tiny heads, and think of dear old Herriot's quiet eye that watched them long ago and wore them into the patchwork of "Man's Melody"—

"Not that he may not here
Taste of the cheese.
But as birds drink and straight lift up the head
So must he sip, and think
Of better drink.
He may attain to, after he is dead."

Though no snow has come the thick frosts in the morning make a very brilliant whiteness, and the sunrise over it in its opal glory has a grand and awful look that reminds us of the sky in Holman Hunt's great solemn picture of the scapegoat. We shiver as we draw the curtains and look at the familiar landscape in this sad wrath-like majesty of dawn. A touch of sorrow and a thought of doom always have a majesty of their own,

"Here I in sorrow sit, this is my throne,
Let kings come bow to it."

In the green mid-day the line of the low horizon-hills is straight and handsome, and seems to frame a Dutch scene with Cupy-like cows of red and black. The one round hill with its one tree that rises from the ridge calls for a touch of tower or turret to fulfill its beauty. But now in the freshness of the dawn, with the silvery whiteness of the frost distinctly pencilling the trees and bringing it out in delicate relief against the sky of gold and rose, we see in these hills all the beauty of Persiang's landscapes in the background that so intensify the pure stillness and holy grace of his Madrinas in the foreground.

Christmas with a singular feeling of intemperate spring in the air, has come and gone with snow as far removed as ever. The year's stores begin to stir in the fields, the honeysuckle over the porch has put forth blue-green feelers and the barberry quite hopeful little perfect leaves, as though assured that winter's cruel fang is drawn. This is the time to delight, in all the curious shades of difference in the green of the young crops. On a pale afternoon when the trees on the far ridge stand very lonely and silent but for the little noiseless noise among the leaves,

"Born of the very sight that silence beavrs."

when the sky withholds her treasures of colour and light and seems to move on the sun she veils in her impulsive whiteness, we know to note the deep emerald of that field of thick young eye which shows so bright and clear against the neighbouring hedge. The little separate blades of wheat in the next field that come up in timid rows have more grace, though their pale green, as of the chrysoprase, does not add such rich colour to the canvas. The horns sheep with their white faces in that pasture-field of dingy grass all moist and rooted by the flok, look gray and rough beside the one snow-white lamb nestled by its mother. On the other side of the road the unhorned black-faced sheep have lambs that are dull and rough in aspect. There are the two old types, always old and always new: the pure white lamb, "the Lamb of God that taketh away the sins of the world," and the other homely one, the stripy lamb foot-sore and weary that the shepherd finds and puts upon his shoulder. As we watch closely the monotonous country life these old types live afresh.

The afternoon grows paler still. How warm that spot of colour is where the great red-brown cattle slowly chew the cud as they lie near together in the dark muddler-brown of the farm-barton. There is still enough light to distinguish the graceful bird that shoots swiftly from the hedge and soars near the ground, "a lady wash-dish," my country friend tells me, "a terrible proud bird, two parts like a tom-it."

We are far indeed from the train-whistle in these quiet lanes, the musings-ground of silver-topped Swedenskow, that ancient kingdom of wealth divine, and the birds seem to know it; in a few more minutes a lovely white-finch with many bright touches of red and yellow in its wings, flies across the road as we take a sudden turn, to find ourselves, before evening sinks, in a very parliament of rooks cawing the air with level flight or cawing hoarsely as they settle to their unknown business in that Runnymead that lies beneath the ridge crowned with thick Scotch firs. "If you see one rook 'tis a crow," is the old country saying, and crows are far enough if that be true!

A wealth of berries that has given the lie to the saying that many berries mean a hard winter, have made that bright-eyed robin with his resplendent waistcoat so fat and impudent, that even the snake and rattle of the donkey-cart over the newly-mended road does not disturb him from taking stock of us with his head-like eye.

Let no one imagine that the country is dull in winter. The winter-scent of earth and rotting leaves are keen and bracing, the winter-sights may "take their colour from an eye that has kept watch on man's mortality," but without them all the wealth of Perieg's landscapes is incomplete.

"Sad with the whole of pleasure."

"THE KING'S DAUGHTERS". THEIR CULTURE AND CARE.

By LINA ORMEN COOPER, Author of "We Wives," etc.

PART II.

IN HEALTH.

In the set of sumptuary laws given us by the King for our guidance in the case of His daughters a good deal is said about dress. As we read, our hearts re-echo the old cry for lovely things. We still admire "bells and grannatas" on the hem of garments made for beauty and beauty. We still count the "fringes" on border and seam. We still show our pa. mental love by making robes of many colours and pieces (Gen. xxxvii. 14). We still give the greatest attention to the wild beasts of the desert. Yet, though it immediately stimulates the sense of taste and increases the flow of saliva, we would not condemn our households to a continual course of salted meat. How to give, when to give, why to give, must be learned carefully by every guardian of the King's daughters. In a word education must be useful to read prayerfully and carefully the fourth of Romans. The wisdom of St. Paul is even more inerience therein than his principle.

I have begun this chapter upon the health of our girls by talking of food, as cookery has a great deal more to do with health than is generally imagined. It has much to do also with their moral and spiritual development, of which more anon. The chief object in cooking food is all to render it more palatable. Digestion is so much impaired by unskilful handling of meat. Heavy, half-baked bread, cannon balls of boiled puddings; badly made pastry; half fried vegetables, are more than "misfortunes." They are culpable failures, bringing in their train delicate health.

In ordering the menus for our households, we should remember that our bodies need flesh-forming, heat-giving, and mineral matters in the food. All animal food, cheese, butter, and eggs, contain the necessary substances to supply the necessary habitat for the animal tissue - water, and toughen muscle and bone. Dripping, butter, sugars, treacle, jams, are so much carbon to keep the fire of life alight. Potatoes, onions, and leeks "are the common..." supply potash, soda, iron and phosphates. Now, in different ratios, every girl requires all these constituents in her daily food. But remember, imagination and appetite do not always require a great amount of both nitrogenous and carbohydrate matter, otherwise her body would quickly wear out. On the other hand, indigestion is a common complaint, and only accumulate "too solid" and too much flesh if urged to share the quantity of her sister's feasts. Appetite must be regarded and
"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

A MOTHER'S CARE.

Tastes consulted. It is not from "cussedness" as our American cousins call it that nature dictates beef to one child, mutton to another—fat to Jack Sprat and lean to his wife. It is a wise and intelligent carying out for certain reasons, by the structure of two hundred bones, and numerous muscular fibres we call our body. There are miles of thread-like nerves, bundles of tissues, organs of respiration, circulation and digestion, to be kept in order. And "appetite" or "fancy" is one of the masters who tries to provide for this artfully constructed and perfectly adjusted machine. We should bow to his dictates and follow his guiding. "Without reproof, by substituting the more excellent way, we secure obedience without seeming to seek for it," has been said of a great mother lately gone to her rest.

In a more mundane fashion we can often do the same. About food, thin child will not eat fat. Give lean, then, milk, cream, cheese, oil on her salad, butter with her potatoes. More trouble, eh? but with perfectly satisfactory results. Our daughters will grow as the polished corner-stones of the temple—firm, strong, steady, reliable, beautiful.

There are nine things at least wanted to keep the bodies of the King's daughters in health—

We close this spoken of number five.

The first and second requisites on our list we can bracket together.

Girls growing girls—should live almost entirely in the open air. Even when in the house plenty of oxidation should be present pouring in through open windows. The well-fitting window frames and door panels which we insist upon, the "register" fans down with these and the chimneys, make our modern buildings almost air-tight. Therefore windows must be open day and night if the King's daughters are to be kept healthy. As early in the morning, too, as possible, they should be encouraged to run out of doors. To pick fruit for breakfast, or roses to lay beside mother's plate, or to feed a pet rabbit. Not a long walk, I beg, before the first meal. Nothing is so tiring or injurious for a growing girl. If our daughters are turned loose in the open air, they will of necessity get all the sunshine the possible in Foggy Albany. They will not have blanched faces and anemic frames. "Where the sun never comes, the doctor doth not dare." Do not be afraid of freckles and tan and burn. They are not unbecoming to our young people. Cover the round heads with sensible hats to prevent the sun striking on the brain. The "Mugwumps," made of a yard or so of plain muslin, needed in the summer to prevent a stroke of heat at the back of the neck. Then send the girls out without fear. Respect for mother and imperatively demand fresh air and exercise. Here we come to point 6.

Perhaps, nowadays, there is a tendency to give our girls too much exercise. Whatever with gymnastics, athletics, bicycles, they are more apt to overdo than to underdo. I consider that every woman-child, until fully grown and developed, needs one hour's rest in the middle of the day. Spices would less seldom be bowed, shoulders less often round, backs less frequently bent, if our mothers lay down more often. Straight as young poplars, graceful as young birch trees, we should watch them growing up as plants in their youth, full of colour full of refinement, standing in sunshine and air through the, I dare not say how many thousand, pores of their bodies. In order to do this thoroughly I would remark, en passant, that plenty of water is necessary for the King's daughters in the East, most scrupulous cleanliness is the rule. All through the sanitary code of Moses, the erstwhile Prince of Olb, washing is one of the things insisted upon. I once heard a very, very old daughter of the King—yes! really His daughter by faith and trust and adoption—trepid, and a few of our more exposed rivers. But the little, dark, coffin-shaped bathrooms in most modern dwellings are simply ice-houses! Let Dorothy and Phoebe and Rose take the chill off, and liver, lungs, and heart will thrive. Sweet little King's daughters! We would not condemn you to one pang, one shock, one tear or sorrow.

"Of all the thoughts of God that are orbs inward into souls after. Along the Psalmist's music's deep. Now tell me if that any is. For gift or grace give this—He gave His beloved sleep."

And what God gives as a good gift, we should see that His daughters enjoy to the full. From pole to pole this gentle thing should be more cultivated. In the arms of "nature's soft nurse" we especially should place our little girls. A poet author more than two years ago—Miguel de Cervantes—recognized the beneficient influence of Ole Luk Loy. "Sleep covers a man all over, thought and all, like a cloak; it is meat for the hungry, drink for the thirsty, heat for the cold and cold for the heat." Yet how little coast very to the "sweet restorer, balmy sleep" on the part of our children. How little attractive we make the small white bed and soft pillow and warm treat Ole Luk Loy so foolishly. Let our weary little girls set up, thinking they can "make it up" another time. So now in matter of fact, the loss of sleep cannot be repaid—once lost never regained.

"Not poppy, nor mandragora, Nor all the drowsy syrups of the world Shall ever medicine thee to that sweet sleep Which thou ow'st 'd yesterday."

Nature's debt in this matter is a cumulative one. Every hour spent in repose paves the way for another. Of course there is no strict rule of this, but the habit, however, of early to bed should be cultivated. Every child under twelve should be asleep before midnight. The bedclothes should be warm but light. Heavy quilts only wear the little frames and put an extra burden on them. One pillow, a pair of soft blankets and a down quilt are all that is necessary for refreshing slumber. See that your girls lie as straight as possible in bed. In a convent school, where every action is studied and observed, the students lie with hands crossed on the chest, and feet going round at midnight to see this posture is not maintained. One of the pupils has told me how quite unconsciously arms were brought into position just before that midnight, which was sound sleep and absurd to many, but a right principle underlies it. It is quite a natural position. Strange to say, a wee baby girl with whom I am brought much much much on other hands on her breast whilst going to sleep. For the King's daughters enjoying His gift it is a beautifully ideal attitude. Do not be in a hurry to wake them in the morning; nature will do so at the proper moment.

In the matter of warmth I think we are not generous as a rule. Girls—gown and room, parlour and schoolroom, but send our children even to a chilly vault-like sleeping-room very often. I
COMPETITION FOR "STAY AT HOME GIRLS."*  
FOURTH PRIZE ESSAY.

WHAT I DO WITH MY TIME.

I am a real stay-at-home girl, for though I am 18 years of age, I have never been to school a day in my life. I am an only child and have always been taught by my mother, but have taken music lessons from a master. Until I was 17, my studies took up most of my time, but now I am free to do other things. My life is a very busy and happy one, & I have no desire to leave my home, unless of course I should have to earn my own living. I have a great many pets—a beautiful pony; a dog; parrots; & canaries—and my first morning duties are to feed and attend to them all.

I am my own groom & I quite enjoy putting my pony through his morning toilet, & he knows me so well that he will let no one else touch him with the brush or comb. Grooming a horse is splendid exercise & on a frosty morning there is nothing better for sending a delightful glow over one's whole body. If I wish to ride I just saddle up & go off for a good gallop.

After my family is put right for the day, there are the pot plants & garden to be watered, & the flowers cut for the dining & drawing rooms. Arranging flowers is a very fascinating occupation, & I generally spend a good hour over it. I take a great interest in the garden. I have several particular beds to plant & keep tidy. I sow & plant out all the annuals each year, & I sincerely pity the girl who does not know the delight of gathering flowers, & who does not grow them herself. I advise girls to garden if they wish to be happy & healthy, & I am sure that if more followed his sensible advice, there would be fewer nervous & sick girls in the world.

I am very fond of writing—both stories & letters—& I am a reporter for several papers

Providing means that Fanny and Blanch may skip and jump with her kin. Remember, "no trout is half so shy as a sensitive growing youth or maiden." Encourage independent action and help the children to be happy.

The last requisite is plenty of "love." Of this I shall treat fully in another chapter. "A little child is a figure full of pathos. Without devotion of its own it finds itself in a most difficult scene; it looks around on every side for help, and we who are grown waywise should make it feel at all times tenderly welcome, and nourish it in the fruitful atmosphere of love, trust and approbation."

With these words from the mouth of a greatly successful mother of King's daughters, I must close this article.

"Let the woman beware," said the Secret One to Manooh of old. So let each one of us remember that loving our girls is part of our work in the world. Not an ornamental fringe, but the very womb and soul of life. It is ever day to give our children an environment of loving sympathy. "Cursed be he that doeth this work of the Lord negliantly, deceitfully, careless or heedlessly" (Jer. xlix. 10, margin.)

*(To be continued!)*

Alice Margaret Dunx  
Fortitude Valley  
Brisbane, Queensland.
A glittering sea and a flashing sky,
Give a good "God-speed" o'er the waters!
As the boat leaps out at the bugle cry,
Give a good "God-speed" o'er the waters!
"The price of my hand," the maid cried,
"Is my Father—free—ere the new moon's tide."

A low-lying plain, and a blood-red field,
Give a good "God-speed" to the bravest!
Where the strong men die, but will never yield,
Give a good "God-speed" to the bravest!
"The price of thy life," the victor cried,
"Is a captive's life, ere the morrow's tide."

A moonlit sea and a cloudless sky,
Give a good "God-speed" o'er the waters!
And the maiden watched from her turret high,
Give a good "God-speed" o'er the waters!
The grey-haired chieftain was by her side,
And the lover had come to claim his bride.

"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

BY LINA ORMAN COOPER, Author of "We Wives," etc.

PART III.

In health.

In my last article on our care of the King's daughters in health, I laid down some broad and general rules. There are, however, many details which could not be included in that paper for lack of space. To-day, I would add a little on the care of the hair, eyes, ears, teeth and nails of our children. We will begin with that glory and crown of budding womanhood—the hair (1 Cor. xi. 15). It is almost strange how much is said about this "cellular filament" (as a dictionary defines it) in the Bible. The Hebrews were certainly fully alive to the importance of the hair as an element of personal beauty. Baldness was one of the disqualifications for the priesthood (Lev. xxi. 20), and cutting the hair was a mark of affliction (Jer. vii. 29). It would be interesting to enter into the history of braided, curled, and perfumed locks, but perhaps out of place in this series. So I will content myself with a few hints as to its management.

Absolute cleanliness of scalp and head is always necessary. At least once a week, schoolgirls should have it washed. The yolk of an egg well beaten up, and applied to the roots with a soft brush or funnel is a nice cleanser and keeps the "amber droppings" thus we so admire in childhood. Well wash it off in soft warm water, and the hair will never be rough or harsh to the touch. A few drops of ammonia will soften hard water sufficiently to use, but rain water collected in clean vats and tanks is infinitely better. It is cleaner as some people seem to think that all soft water must be pure. To wash children's heads in muddy surface water is worse than useless. Strain it, if rain has not fallen for some time. Dry the damp hair by brushing gently in a circular fashion, encouraging the dandruff to separate and fall into tender vials. Every day the girl's hair should be brushed for, at least, ten minutes. There is an improper as well as a proper way of doing this. Who does not remember the hard scrub of a brush wielded by an energetic but unscientific nurse? Compare that method of torture with the soothing effect produced by a professional coiffeur. The brush should be placed gently on the scalp, then drawn equally gently through the whole length of the hair. In this way the oily substance contained in the root gland is pressed through the hollow stem, brightening and feeding and nourishing each filament. In dressing the hair, may I plead for a due exhibition of the staid brow of childhood? A long fringe cut over the forehead and hanging to the brow is well called the "idiot bang." It stamps a child with a stupidity not given by nature. It altogether disguises the open look we so value in the innocent bairns. To cut short the hair of the King's daughters is another injustice to them. It may save trouble, but in cases of infectious disease it is necessary; but it is really wrong to have them so shorn, when longer hair acts both as a veil and a crown.

The care of the eye is one but little understood. It is one of the most delicate organs of the body. Fortunately too, it is one of the strongest, otherwise how often would young girls suffer. Sent out in bright glare in bonnets that do not shelter optic nerves in the least; made to read and write with gas-light falling on the face. Allowed to strain sight by working after dusk. Such are some of the every-day habits we see round us. Let us see to it, that hot briars cover the brow, blue or grey eyes of the King's daughters; that light falls over the shoulder, on to desk and book. That the twilight hour is spent in loving converse rather than in manual labour.

One cannot but notice how much more frequently spectated youth is seen nowadays than it used to be. Every board school babies look solemn-wise in prepared glasses. It has been proved that position at desk and on form is the reason of this strained sight. Prevention is better than cure. *Verbum sap.* The eyes should daily be bathed—not rubbed over—with cold water. They should be carefully dried, and the eyelashes smoothed outwards; that ridge of protecting bone called the eyebrow should also have its arch of hairs carefully trained to go in one direction, not dried anyhow and left in the rough.

The care of the ear is an important thing. It is not until one has experienced sorrowful trouble in tending a sore ear that one realises how important. Every morning a little girl's ears should be gently washed with good soap and warm water. Every hollow of the curious modelling should be attended to. Then carefully dried with a very soft towel or lamb's-wool. The wrapped up end of a cloth forced into the opening of the auditory canal has often done much damage. If a slight accumulation of wax renders any such treatment necessary, drop a little warm oil into the
SISTERS THREE.

CHAPTER XVI.

Three years had passed away since Lettice Bertrand had bidden farewell to her Northern home and accompanied Miss Carr to London, but there was little sign of change in the big drawing-room at Kensington or in the mistress herself, as she sat reading a magazine by the window one sunny June afternoon. When the purse was well-lined it is easy to prevent signs of age so far as furniture and decorations are concerned, while the lapse of three years makes little difference in the appearance of a lady who has long passed middle age. Miss Carr looked very contented and comfortable as she lay back against the cushions of her easy chair, so comfortable that she groaned with annoyance as the servant came forward to announce a visitor, and the frown did not diminish when she heard the name of Mr. Newcome to come up, Baker! I will see him here," the man disappeared, and she threw down the magazine with an exclamation of disgust. That stolid young man! How shall I have to listen to impairing anecdotes for the next half-hour. Why in the world need he inflict himself upon me?"

The next moment the door opened and the "stolid young man" stood before her. So far as appearance went he was, however, the same. His height, for Arthur Newcome was tall and handsome, with yellow hair, a good moustache, and strong, well-set up figure. He came forward and shook hands with Miss Carr in a quick, nervous fashion, which was so unlike his usual, stolid demeanour, that the good lady stared at him in amazement.

"He is actually animated! I always said that it would take a conviction of nature to rouse him from his deadly propriety, but upon my word he looks excited. What can have happened?"

The laws of propriety do not always permit us to ask the questions nearest our hearts, however, and Miss Carr was obliged to content herself with commonplaces.

"It is a beautiful day. I suppose Madge got home safely last night? She isn't too tired after the picnic, I hope!"

"A little fatigued, I believe, but no doubt she will have recovered before evening. She is apt to get excited on these occasions and to exert herself unduly."

"Nobody can say the same of you, more's the pity," was Miss Carr's mental comment. "Madge rows very well, and the exercise agrees with her form," she said shortly, and relapsed into determined silence. "I suppose he has something to say, some message for Lettice most likely; better let him say it and take care of as soon as possible," was her hospitable reflection; but Mr. Newcome sat twirling his hat and studying the pattern of the carpet in embarrassed silence.

Three times over did he clear his throat and open his lips to speak, before he got the length of words.

"Miss Carr, I—er, I feel that I am—er—that you may be—I am deeply sensible of my own unworthiness, and can only rely on your kind generosity and assure you of my deep, and sincere—"

"What in the name of all that is mysterious is the man driving at?" asked Miss Carr of herself; but she sat bolt upright in her seat, with a flush on her cheeks and a pang of vague, indescribable fear in her heart.

"My dear Mr. Newcome, speak plainly if you please! I cannot follow your meaning. In what respect are you a claimant for my generosity?"

"In respect of what is the most important question of my life," replied Mr. Newcome, recovering his self-possession at last, and looking her full in the face, in what she was obliged to confess was a very manly fashion, "in respect to my love for your ward, Miss Bertrand, and my desire to have your consent to our engagement, to ratify our own promise."

"Her own promise! Your engagement? Lettice? Do you mean to tell me that you have proposed to Lettice and that she has accepted you?"

"I am happy to say that is my meaning. I had intended to consult you in the first instance, but yesterday, on the river, we were together, and I—"

He stopped short with a smile of tender recollection, and Miss Carr sat gazing at him in consternation.

"Mr. Newcome had proposed to Lettice, and Lettice had accepted him. The thing was incomprehensible! The girl had shown not the slightest signs of preference, had seemed as gay and
to boys, also militates against the progress of women gifted with musical genius; but, in the opening of the doors of several of the universities mentioned above, some few years ago, with equal privilege of graduateship in all faculties, to female as to male candidates, the chances of qualification in every branch of art are becoming more equalised for the sexes.

We regret to say that the old-world disbelief in the professional musician is not quite yet a thing of the past; witness the fact that many parents still consider a few "finishing" lessons from a fashionable "master," no matter how indifferent or careless he be, a necessary completion of the musical education of their daughters. Still more flagrant and unreasonable also is the prejudice, unhappily indulged in by many from whom we look for more generous sentiments, that often debar the thoroughly trained woman organist from having as good a chance of a fitting church appointment as her more fortunate brother performer; in which connection we would merely say that from her innate devotional nature, her inherent power of child-training, and notably her tact in the avoiding and quelling of the only too frequent "choir jealousies," there is no presence so apt and influential in the organ loft as the earnest, devoted and fully-qualified choir-mistress.

There is no doubt, however, that a just appreciation of women's work in the sphere of the professional musician is only a matter of a few more decades; and meanwhile the conferring of musical degrees upon them by the universities has even now given those few who have already utilised the privilege a status that it is impossible to dispute; and it is with a view to encourage more girls to avail themselves of university distinctions that the writer, who may claim some experience in the matter, would hereupon urge all of her sex so disposed (and especially should it be the case with those who wish to fulfil high and responsible positions in the musical world) to qualify for a University Degree in Music.

It may be desirable to mention that, in the matter of examination fees, the expenses range from £10 to £30 or more at the different universities, but these do not cover the necessary expenses of preparation, the purchase of books, etc. However, with care and economy, especially if the facilities granted to students by our public libraries and concert-halls, and the number and variety of classical concerts held yearly at popular prices, the amount of money to be spent upon a musical education need not fall too heavily upon a limited income. A little self-denial in the matter of dress, and perhaps the giving up, during the period of study, of even a few of the amusements and distractions over which we often spend more time and money than we are aware of, will soon provide funds for the comparatively small outlay which is involved by entrance upon a collegiate career.

The amount of space already occupied by the present article precludes the possibility of giving some hints as to plans of study in preparation for a university course; but perhaps at some future time there may be opportunity of treating this matter fully. The main point to be borne in mind in connection with musical, as with all other work is that courage and perseverance, with a worthy and lofty aim in view, are bound to succeed in the end, whatever be the nature of the task or the difficulties to be overcome.

Given, however, the capacity for endurance and the determination to do nothing short of one's best, excellent results must ensue, especially if all work is undertaken, not so much in order to gratify personal ambition, as to utilise to the utmost those gifts which come to us from the Giver of all good things.

"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

By Lina Orman Cooper, Author of "We Wives," etc.

PART IV.

IN SICKNESS.

In a former series of papers I gave advice of how to treat our girlies in the infantile diseases that beset their earliest years. Croup, convulsions, dysentery and thrush were fully treated of in June 1897. This month we go a little farther and encounter greater lions still. At the door of the beautiful ivory palace of health, however, stands one "Watchful." He calls to every guardian of the King's daughters, as he cries to the pilgrim of old, "Fear not the lions, for they are chained, and are placed there for trial of faith where it is, and for discovery of those that have none. Keep in the midst of the path and no hurt shall come unto thee." Yet, though we may be well assured that no good thing will be hidden from us and our children, yet sickness is "a very narrow passage" indeed. There is sometimes room "to turn neither to the right hand nor the left." Well for us if our eyes are open enough to see that the Angel of the Lord is standing here, and can bow our heads resignedly (Num. 22). The lions too only guard the Palace Beautiful— the Palace Beautiful of health or the beautiful abiding place of death.

Perhaps of all the childish diseases we dread most, whooping cough stands pre-eminent. I have been told by one of the most eminent physicians and surgeons of the day, that other sicknesses say their thousands, this giant slays its ten thousands. It must at all times be looked upon as a serious disease. The slightest attack of it must be a source of uneasiness to the friends of children. The insidious nature of its approach; the duration of its visit, make it one of the most dreaded scourges of young life.

I am not going to enter into a diagnosis of whooping cough. Any medical book will tell us far better how to recognise and deal with it than I can do; but I do want to warn all readers of these papers never to trifle with this disease. "Only whooping cough" is the bewraying expression of one utterly ignorant of its effects on delicate nervous childhood. The complications are so numerous. Bronchi, inflammation of the lungs, convulsions, tubercular disease and diphtheritic croup, are often set up and established during the course of this disease. We should, therefore, watch minutely for any wheezing, any heat of the mouth, any spasmodic movements of face and head, any enlargement of bow and forehead, any sore throat. A good doctor should be in charge of every case of even simple pertussis. The disorder is now considered to be almost purely a nervous one. The whole nerve centres are deeply involved. Any sudden rebuke, sudden or rapid movement; anything which irritates the child, is sure to bring on a fit of that brazen, terrible, convulsive coughing. So we should be very tender with our little girls during the weeks and months this disease may last, soothing them more with caresses and encouragement than by giving them any of the quick medicines advertised as specific in this illness. Chloral, chloroform, chlorodyne, opium, are all more or less skillfully employed in calming the paroxysms of whooping. They should only be given, however, by qualified practitioners. All mothers can do, is to bind flannel round the upper part of the sufferer's chest, to rub back and spine every night and morning, to quiet and calm the child, and to see she has plenty of digestible, nourishing food. It is in the sequel we women can help our daughters so much. Their liability to fall into bad states of health after whooping cough must never be lost sight of, and we should surround them with every hygienic arrangement. Tilman's salt in their daily tub, if a sojourn at the seaside is impossible. Plenty of milk and cream if staying in a farmhouse cannot be arranged. Out-of-door exercise if we cannot take them to live for a while in pinewoods or on a hillside.
There are more old women’s nostrums for whooping cough than for any other disease. In Ireland any man riding a piebald horse can tell you what is good for the whooping cough. He is supposed always to give an inspired answer. One older I knew, always replied to the question by giving the slight name of ‘Pepole’ and with profound conviction.

My great-grandmother’s recipe book the following prescription finds a place: “Take one tablespoonful of honey, one of good run, and half a pint of turpentine. Make up a bundle of these, and rub the backbone occasionally.” The stimulating properties of run and turpentine doubt often produced much counter-acting effect. We must remember that whooping cough is most infectious, and no doctor will give a certificate of exception under nine months. I have proved this in my own family. The younger a child gets pertussis, the more danger to the child. After six years of age the glottis and trachea increase in size, and there is less danger of suffocation in a paroxysm or by crop.

Another of the lions we would chain by way of precaution. Make a flannel hat out of an old blanket, and pop the patient into this when a pinky red eruction shows what is the matter; tie round the neck—arms in a bundle to the back—this in the case of colds in the head, but also a bundle that can get no chill. Suppressed sneezes are responsible for so many things, and to keep arms covered helps the run faster, if possible.

In caring for the King’s daughters, I think we should always seek a medical man’s aid. The gifts of healing are still entrusted to those who no medical science is. I would never advocate a mother treating disease by herself; but a mother should understand symptoms.

We are better informed, many children’s lives would be spared, much suffering avoided, and much sorrow saved. Knowing a little about the seriousness of disease, we should enter more readily into the plans and views of our medical adviser. “Sickness is always a fight between life and death,” and in this battle, obedience, promptitude and patience are our aids. The treacherous ailments in the present day do not consist merely in the dosing with drugs.

We understand now the importance of suppressing sneezes and dusting the house and rooms, the dusting, and the state of the clothes. Nursing is a practical matter. There is little theory in it. Experience—one ounce of it—is worth a peck of speculation. There are, of course, a few broad rules that apply to nearly every case of illness. Ventilation, for one thing, is as necessary in measles and bronchitis as in scarlet fever and asthma. Miss Nightingale says, “The very first care of nursing, and the first and last thing upon which a nurse’s attention must be fixed; the first essential to the patient, without which all else is useless.” For him as it is fortunate, with which, I had almost said, you may do all the rest the same is: to keep the air he breathes as pure as the air external without child. The sick room should have the proper window and curtain, blacked out nimble, with bright lights of abundance, not a sluggish cinder and slack bed. The window should be open a little weeny bit even in winter. Also, the window should be kept clear and the nurse to maintain, and a thermometer in the sick room to insure this is necessary. Remember the sick room by day and night—is the time our patient may get a chill and die in every spasm. Make no fire then, rather close the window.

Do it quickly and decidedly, not gadgeting gently and timidly with one bit of coal after another, conscious of your patient by dawdling; but even at the best of half an hour’s fire— this minute’s noise rake out the lower bar and pile on fuel.

Light is another necessity. In measles, of course, eyes are often affected and too weak to stand a glare, but in most cases of sickness the bedroom should not be unnecessarily darkened. The natural light of dawnlight and of sunlight is more active, and that is what we need, is it not? in all cases of illness. At night a small light should be burned, but behind the curtain. It shows us how necessary darkness is to rest and repose. “Discretion” is still a welcome resident in the Ivory Palace, and in the matter of light and darkness should be carefully consulted.

“Prudence” too, will counsel isolation in all cases of eruptive diseases. Measles is so infectious that it sometimes seems useless to try and prevent them. But no guardian of the King’s daughters is justified in running any risks. Mistres and Timorous ran away from the House. But Discretion, Prudence and Watchful kept guard over them. Let us run to rest.

Scarlet fever is a third roaring and raging enemy that can be fought by the block of the King’s daughters. A fire has never been needed, I have never had to nurse it in my own family. It is one of the most fatal diseases to which our girls are liable. Mortality from it is really not terrible. I am told that present day treatment differs in in toto from the old-fashioned way. Plenty of iced drinks, daily sponging with vinegar and pepper, constant administration of cataplasm by application. Constantly changing linen, instead of leaping on bed-clothes, giving hot beverages, wrapping in blankets, exacerbating all fevers without symptoms. Immune quinine is necessary to prevent the spread of this most “contagious blastem,” as Shakespeare terms this and other youthful disorders. Sauces of cardo and water should stand about the room. A sheet dapped in Comdy’s fluid, or a weak solution of permanganate of potash should hang behind the door. Even duvet-utile should be removed only in a bath of disinfectants. Bed and body linen should be soaked in the same.

But, the truest disinfectant like the pure air of heaven. “This should be allowed to permeate and circulate through the apartment and through the house. Air, air, air, is the best cure and the worst of all the fictitious diseases.” Yet air must be admitted scientifically so as not to chill the patient; also all draughts must be avoided.

After a case of any such infectious disease, a notification to the sanitary officer of the district will be followed by thorough disinfection at the minimum cost. If this is not done a sulphur fire is lit. They cost about ls. 3d. each, and are simply blocks of prepared sulphur with a wick attached. After closing and stopping with paper or paper every window and door, and a sheet over every chimney, and spreading out everything that has been in the way of infection, place a fire in the fire through, and set it on fire. After twenty-four hours, the house is deserted. You are to be convinced that no microcosm could exist in such an atmosphere. Every germ must be killed in the sight. Brasses may be dim; down quills o’erwear; bed-barements smelling strongly; picture frames spoiled—but, a clean bill of health can be given to the house. If a nursing nurse has helped in the care of the King’s daughters during the illness, it is her business to then disinfect the chamber. For the sake of others as well as ourselves, we should be very careful about not spreading infection.

“In honour preferring one another,” is a good motto for the travelling, bustling, hurrying work-a-day world. No guardian of the King’s daughters should allow them to go by bus or taxi in the same day as their patients. Other people’s children are somebody’s darlings. To expose them to infection is cruel wrong. We should be scrupulous in all these things. Do as the others as we would wish they should do unto us.

Nervous disorders, such as St Vitus’ dance, are very apt to attack girls between eight and twelve. A sudden fright should always be deprecated. I know of one child who nearly lost her life from the state of physical nervousness it was produced by a frog being thrown at her. Another who suffered for months, and on inquiry, the disease dated from the purchase of a jointed snake held in her terrified hand by a mischievous brother.

We must remember that great and sad results often follow from trivial causes. A toy in some cases may become an instrument of torture; a shadow; a sound. We must watch our girls and shield them from anything which seems to upset them.

Mother’s arms should always be open. Her bosom, an oasis for their refuge. We must also realise that a false delicacy often ends in the death of a little girl mentioning ailments. A false delicacy which we ourselves have fostered by an over-refined diet, in turn to take away the authorised knowledge made Adam and Eve know they were naked. True modesty consists in being pure. Society demands restrictions on coverings and shaming. That mother and child such a thing should be unknown. Our sweet, beautiful, women-children, should know no shame. God has given them a weapon of all weapons. The contemplation of their bodies are part of His great scheme. I can not write more definitely of what I mean—guards of the King’s daughters will understand.

Perhaps I can not do better than close this article by giving a short list of things useful to be kept in medicine chest or drawer. Amongst the things most likely to be useful are, a two ounce bottle of castor oil, a similar one of ipecacuanha wine, well corked and sealed. (Hippo wine soon loses its power on contact with air. What is called rapeseed oil is only an emulsion and deposits a sediment it is useless.) This should often be replaced. A bottle of tincture of balsam. This is for bruises; but in dealing with it you require to use it with care. It should never be rubbed on an open wound, Tyrchips may and frequently will ensue.

One pinch bottle of linseed oil and lime water in equal proportions. This is called green oil and is useful in cases of burns and scalds. Pour on the surface at once and it excludes air from the injured tissues.

A pound tin of linseed. Keep this in a tin of other useful ingredients in it will soon dry out. This is for poisoning a small cut or wound of mustard, for the “plaster” so often called for. A little sticking plaster and gold-foam, or roll of old linen for bandages, another of flannel for a cold, a soft one, a bandage scissors. A few bottles of the homoeopathic preparations of—organic, for use in feverish situations; (2) “lucky,” cold; (3) nux vomica, for an attack of ganston or constipation; (4) belladonna, for a relaxed throat; (5) spigonia, for coughs, colds and neuralgias; (6) meat ant, for toothache; (7) cumin, for coughing; (8) morison’s salt; a little old brandy, and a small of cotton wool.

With this outfit we can meet the few stray lions that may prove almost excruciating in the narrow way before the palace of health. Pack each of them in place with prayer. Lock them up with a promise, and you will calmly meet the worst of life.
were very fond of her. Her husband, although he had not been in love when he married her, grew more attached to her every year, and Beatrice, who was not given to analysing people or to weighing their virtues and failings in the balance, looked upon Aunt Ella almost as if she had been her mother, and gave her the affection she could not bestow upon the parent she could scarcely remember.

There were times when the girl realised that the relationship they bore to one another was not exactly that of mother and daughter, and these times were generally when she saw Edith or Margaret in their homes; but she knew that even mothers and daughters are not always in sympathy, and Aunt Ella was never unkind and not often even irritable. Moreover, up to the present Beatrice had never had to rely on her for companionship or society; and she herself was undeveloped. Aunt Ella's childishness was not incongenial to the child.

Up in the nursery Beatrice played quite happily with little Eva, quite unaware that her future was the subject of discussion to the ladies in the drawing-room. She was summoned before very long to join them.

"Then I shall see you on Tuesday, Beatrice," said Mrs. Gilman. "Come about eight, dear. I am so glad Mrs. Swannington will spare you to us. I will take great care of her," she said laughing to her aunt. And neither lady had any idea that this casual visit would in any way affect Mrs. Swannington's plans, or Beatrice's life.

"Mrs. Gilman," said Aunt Ella, as they walked away from the house, "would be very glad if it were not for her husband. They know nice people and she makes a photographic exhibition of them in her drawing-room that others may see it. But it is Mr. Gilman who attracts them. I noticed her to-day. She is painfully thin; her manners are not distinguished and her colouring is insipid. Your ordinary respectable Englishwoman how she is a bore. Come now, we must hurry, or your uncle will be home before we are back."

Mrs. Swannington always made a point of being at home when her husband returned, and it was so to welcome him, uniformly amiable, and full of the gossip of the day or little items of personal interest which would beguile him for the short interval till the dressing-bell rang. She was certainly a model for many young and more attractive women in the way in which she studied her husband in little things. It is true she had abundant leisure and no other claims on her time, but still she did arrange her life by his, and if she spelt him at any rate she was not the loser. She made herself necessary to him, kept her best side for him, and made his home-coming cheerful.

The shopping was accomplished somewhat quicker than usual with the desire to get back in Mrs. Swannington's mind, and Beatrice found herself the possessor of a very pretty tailor-made costume. She was what is called "stock size" and could wear ready-made garments with very little alteration, an impossibility to Mrs. Swannington. While the figure, as the young ladies in the shops always assured her consolingly was so very uncommon. Some chiffon was also purchased to freshen up one of Beatrice's simple evening dresses for Tuesday evening.

"Generally," said Mrs. Swannington by way of comment, "girls of your age look so dowdy of an evening. One realises that no new evening-dresses are laid out for one," Beatrice was not undeveloped, and she herself was undeveloped. Aunt Ella's childishness was not incongenial to the child.

"Come about eight, dear. I am so glad Mrs. Swannington will spare you to us. I will take great care of her," she said laughing to her aunt. And neither lady had any idea that this casual visit would in any way affect Mrs. Swannington's plans, or Beatrice's life.

"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

By LINA ORMAN COOPER, Author of "We, Wives," etc.

PART V. 

Home Influence.

"Instruction is given in the school. Education takes place in the home. The masters are the mothers."

It seems strange for the Christian writer, of a Christian paper, treating of a Christian home, to begin the article by a quotation from an Agnostic source. But Renan has hit the nail so straight on the head that I venture to call the thought, "Home influence" what a vast vista it opens to us on the subject of a number of different things it involves. Myrrh, aloes and cassia, as well as wrought gold! Not only anointing with the oil of gladness, but with a holy anointing made from the most attractive and ragged-looking myrrh bushes, red, sweet-smelling cedar, and rough outer cinnamon bark.

Our hands, dear fellow-guardians, need to be wise and skillful in order that the garments of the King's daughters may possess the perfume distilled from the bitter drugs. "In the outer part of the palace" (true rendering of Psalms xlv, 9) our daughters are secluded in their youth for us to weave their garments with unwrought gold (Rev. Ver.), and to adorn their vesture with needlework. The nursery and school will contain no contemptible, "Fetal for weal or woe of the atmosphere of the home."

If my remarks upon the subject seem disjointed, it is because there is so much to be said, and so short the space to say it in. Just as the thoughts strike me so I jot them down.

First of all religion should not only be made a Sabbath garment, it should be the workaday attire in our homes all the year round. Daily faith should be seldom absent as daily family food. A habit of spending a few minutes alone with God should also be established. "Grace" may be asked by any child in turn and thanked for return. Reverence in these matters is most necessary too. Do not mix up the Bible with ebullia of breakfast and supper. Let it stand on a lectern of its own and bid the reader stand to read therefrom. Wherever possible conduct a little solemn service. These gatherings, carefully and reverently planned as part of the home's programme of education, will be ever remembered. Like the blue overshadowings of the ivy on the mud banks of the Nile they will carry an ever recurring wisdom to the present generation, look in the mirror and see us go into other homes there will be no sharing of the great functions of prayer and praise. Golden bells and sweet pomegranates will be daily heard and seen in their new abiding places.

On Sundays, going to church should be the happiest part of the happiest day in the week. No criticism should be permitted, only a general feeling that all are glad when we say, "Let us go unto the house of the Lord, Home education should be directed to this end. To bring our children will never be forgotten. Like the blue overshadowings of the ivy on the mud banks of the Nile they will carry an ever recurring wisdom to the present generation, look in the mirror and see us go into other homes there will be no sharing of the great functions of prayer and praise. Golden bells and sweet pomegranates will be daily heard and seen in their new abiding places.

On Sundays, going to church should be the happiest part of the happiest day in the week. No criticism should be permitted, only a general feeling that all are glad when we say, "Let us go unto the house of the Lord, Home education should be directed to this end. To bring our children will never be forgotten. Like the blue overshadowings of the ivy on the mud banks of the Nile they will carry an ever recurring wisdom to the present generation, look in the mirror and see us go into other homes there will be no sharing of the great functions of prayer and praise. Golden bells and sweet pomegranates will be daily heard and seen in their new abiding places.

..." (To be continued.)

A French writer on heredity and environment has said: "The art of managing the young consists, before anything else, in assuming them to be as good as they wish to be." (This is "suggestion" in its primary sense.) Pascal writes, "By dint of frequently asserting that a much is a fool we make him so." To assert a child is wicked, or indifferent, is not the way to make her affectionate or good. Encouragement is so necessary. The
happy child is beautiful, loving, lovable, spontaneous, open and sincere. Of a truly great heart or character is recorded by her daughter, "She never expected anything of others. She always expected us to do well, and after her long and beautiful life, when she was sitting in the beauty of her love among us, seven years of age, she said to one when asked what she would have done differently as a mother if she had to live her life over again: "I should have made a more perfect impression on the minds of my children.""

"Oh, how I have wished more than once that you had been born with the reeds of beauty, and that you could have been as beautiful as I have been."

Under them another couplet might run—"Two men looked out from their prison bars. One saw the mud. The other the stars." For the mother who always sees the stars! The kingdom of heaven is brought very near her girls. One successful guardian told me years ago, when I was staring the small nursery full of children God gave me, "Don’t them as little as you can."

In the question of housework each teacher makes her own plan. Personally, I believe that those girls who show no aptitude for it might be excused. We wish our girls to come to the house, physically, mentally and morally. Housework is surely not a matter of contention sometimes? But honestly duties may be made most interesting to our little girls. They can send their work into the dairy with you. Let her learn at what temperature milk will "come" to butter. Show her why the handle of a churn is best turned slowly and regularly. Point out the broken knifes that fall to her. Let her wash the crumbs of做cumious compound," salt them, and make them up into the pats so dear to the little heart.

"And let it be a group of trained intellect to bear upon them," and we must try to train in every way until we find the real bent of our children’s mind. From the dairy promote to the kitchen and store room. Let the tiny, busy, cager hands make a pastry "bill" or loaf of yeast bread. Tell her why turnips are peeled thickly and potatoes thinly. Explain the "fat of the earth" by slicing, roasting and boiling. Let raisins speak of sunny vineyards in Italy, rice of Indian paddy fields, lentils of mud banks in ancient Egypt. Spices of the Bible can be a part of the conversation, not a something grudgingly taken from play hours. Explain the science of cleansing cloth, with a due proportion of soda and soap and alkaline. Let the girls learn to clean garments. Put a needle in her hand and tell her of the nine others through which it has to pass before it is ready for her use. Let her make something small and useful for daddy or brothers. Do not weary her with seam and gusset and band. Join in "broom drill" with her or let nurse do, so making a frolic of turning mattresses and hunting the petrifying spider. Mount her on a chair and bid her examine the beautiful web in which "Mr. Fly," she calls it. Then try to make something "just as good." Do not let her be ready to do so. Compare her clumsy "repeas" to the gossamer filaments of the weaver and she will lose all fear of such creepy webbly. Teach her tenderness toward every little thing and chirping bird by the same means, leading her thoughts from the creation to the grand, according to the development of the universe.

But now we come to a more difficult point in home influence—morning training. In one of the too little used collects in our church service we find what is needed, we must constantly speak the truth and boldly rebuke vice. Yet how difficult it is to be John Baptist in our own homes. There are little ones so dearly that we are apt to be half afraid. But solliness, ill-temper, greed, covetousness, deceit, still hold sway in our households.

The seeds are there, what must we do? Have you ever stood amongst the Cotswold Hills and held the source of the Thames in your palm? All are over the borders and a beautiful panorama of heather and bedstraw, bog-cotton, ragweed and golden moss. Cloud pictures chase each other over the "terrible crystal" which is "shrouded in their clearness" above our heads. Rich red brown under foot lies at our feet, and out of it brings this tiny stream. We can hold the Thames in our palm, and let it flow up into the Cotswold Hills! How powerless are we to stem its stream at Westminster or Rotherhithe! So, in the early years of our training of the King’s daughters, we must not, in blaming, interpret her action in its worst sense. She is, in general, too unconscious to have had a completely perverse intention. If we impress upon her the intense character of sin, it may lead to moral paralysis and our efforts would be completely frustrated. Appeal to the divine in them. Believe in the divine in their mothers. Our Father which art in heaven "dispenses of any other belief.

And it is a wonderful lever in home-life. I would not dare to face the future for my own flock unless I was convinced that they are King’s daughters, children of God and heirs of eternal life.

Still even King’s daughters may have blinshness. Sulliness is one of the most disgusting, worse than small-pox marks, or crotchol or any other skin disease. The division brook, black looks and ugliness of a child in the sills is appalling. If we wish the King’s daughters to be beautiful, with the carelessness He pours upon her, then we must do this first manifestation of unsnobability and combat it with all our might. By letting a child acquire the habit of sulliness we let her acquire the habit of unhappiness. If she has committed without making any effort at repARATION.

A sulky child is her own enemy. If we let the unpleasantness grow with her growth, she will develop into a sullen woman. The two adjectives are not quite synonymous. The latter is a far worse disease. A fit and a mood are different. The expression of Psalms xc. 17 says, "Let the pleasantness of the Lord our God be upon us." It is that very pleasantness, very pleasantness to help on to our girles’ faces. In this, the best service we can do our children is to maintain the sweet look of calmness ourselves.

"Allure to brighter worlds and lead the way." If St. C. Ten’s disease be infectious—and so it proved to be—how much more "catching" is example in home life? Truth-telling is one of the brightest jewels we can wear into the borders of the garments of the King’s daughter. Words, speaking the truth and acting sincerely are almost interchangeable words. Comp. marg. Ephes. iv. 25. We need consider all our part to try to "story-telling" the need we have to eyes our anxieties with the salve of wisdom. We must remember that fiction is natural to children. It has been said, with some truth, that a lie is the first exercise of a child’s intellect—the first invention, the germ of art. This has some truth in it before, and it will make us lenient in our view of a "romance." But we cannot blind ourselves with a lie and regard it as a moral lie. In other words, a dissimulation which chooses lies from face. Children are not morally untruthful unless driven to be so from fear. Deceit is like all other lies, judged severity and unscientific education. Each one has been trained naturally to hide an act of disobedience or boldness, children are rather led to tell it as a matter of principle, as an independence. Encourage the little girls to tell the truth and to live up to their dear fellow-guardians. Allow for the "make-believe" which dignifies mud and water into "pits" and sees a wonderful past and future for Alexandria Ann. But, by all means check vicious untruth at once. Let confession never mean punishment. Let penance always bring forgiveness. The child needing severity is the child who lacks discipline. Lavish on the King’s daughters enough love, and threats and blows will be unnecessary. Lovely is the weapon in war. It is the most powerful weapon in all education, especially in home life.

In my papers on Queen Baby I spoke of obedience. No, the obedience. The word is illumined and assumed that lessen whilst still autocrats of the nursery. The King’s daughters will not need to begin again at A B C.

But the secret of all home influence is—LOVE, LOVE, LOVE.

Nothing succeeds like love. Begin with it, go on with it, and end with it. Take your sweet, obedient, truthful, good-tempered little girls in your arms and love them much for being good.

Be your unruly, saucy, beautiful little girls into your arms and love them into being good.

Before concluding this article I should like to say something about the affection of parents in respect to the training of the King’s daughters. We must not forget that in the sight of God we are as much account as our little girls are. The best service a mother can do to her children is to maintain the standard of her own life at its highest.

We need to read, and travel, and learn, and create, in order that we may help our children to do the same. Teach her the habits acquired in the home influence which dispenses a girl to think she is the pivot of the household.

We should generally the receptacle for delicate furniture, broken-legged chairs, old-fashioned curtains. This is not as it should be. Our girls need to be taught unselfishness, and should begin by thinking their concerns, their role, their food, quite of secondary importance. It is really wise to claim a primary consideration from our brains, then from the family, then from the long run. It is so good to give them the habit of unselfish regard for their elders. We must not, it is habit which will govern ninety-nine years of a child’s life. How necessary then to form the habit of "in honour preferring" those above us. But this patience is not in reaching the limits set for it. In the task which is set for parents in the matter of home education, only the words of the Wise One are applicable. "Let the woman beware, for I commended her let her observe." We must get ourselves permeated with the wholesome electricity, bathed in the warm of God’s Holy Word. Then we must do them. Nothing can be sweeter than we are praised in the gates of society, but in the more veiled and sacred precincts of the home, and our children will arise and call us blessed.
"THE KING'S DAUGHTERS": THEIR CULTURE AND CARE.

By LINA ORMAN COOPER, Author of "We Women," etc.

PART VI.

"INTO THE KING."

It has been the creed of all God-fearing nations from the beginning, that the pronouns are "thou" and "our children." Various are the ways in which we say and write that ratiocination that we believe that we bring our little ones to the Lord in baptism, as did Lydia, the purple-seller of Thyatira, and Stephanas of Achaia; others "dedicate" only without the outward form and sign of water. But, some way or other, every Christian parent brings the children to Jesus that He may take them, and bless them. Households still are enrolled under Christ's banner.

To-day I want to speak a little about further bringing the King. There is a natural reticence shown by every human soul in its direct dealings with others. I think those good folk who encourage a "moral nakedness" are wrong. They chiefly on the verse "Out of the abundance of the heart the mouth speaketh," forgetting that in each case an evil speaker is being photographed. We do not talk in patches of our immense love for husband, child or parents. We show our love by our works. Most people are reticent as to their deepest emotions.

Even in our treatment of the King's daughters we should respect spiritual reserve. All the same, night and morning we must bring our girlish "unto the King." A few words of Bible-reading, a few minutes of united, silent prayer. The daily formula—"Oh, Lord, defend this Thy child with Thy Heavenly grace, that she may continue Thee ever near and dear, and daily increase in the Holy Spirit more and more until she come unto Thy everlasting kingdom"—is more than an episcopal benefaction. We cannot, by a softening of mother's hand on the curly head, a reverent closing of eyes, and a loving kiss, the King's daughters will never forget it.

Mrs. Faith, she who afterwards was called upon to bring all her five daughters in one week, unto the King, through the gate of death, had brought them to Him every morning of their short lives in another way. She has left on record the prayer she used, "Prepare these Thy children for what Thou art preparing for them." Such a short, pregnant formula, one might well use even on our busiest days.

I am sure every parent feels that the heart of her child may be forever turned against or toward God by the ideas imbibed in play and schoolroom. We realise the necessity of grave and careful thought, and definite resolve, as to what teaching the girl shall receive on this momentous subject, of being brought "unto the King." We shall not delegate to others the task which carries "joy and gladness," with it yet, "the things and seasons which each mother must seize for herself. The moments are few and far between in which mother and child will definitely realise that they stand on holy ground. This is precious, just on account of their rarity. But the few deeply felt, softly spoken words on such occasions are a very real coming into the presence of the King. Afterwards there will be a thousand showing forths of the King's care, His love, His tenderness, but they will not be spoken of. The practice of the presence of the King, not the presence of the idea have become part of the child's life. We may also bring the King's daughters to Him through every manifestation of life round us. Each and every act:

"Books in the running brooks,
Sermons in stones,
And good in everything."

This should be our programme in moral and intellectual culture.

"New thoughts of God,
New hopes of heaven"

should be woven into the blessings of each day. The flowers come, because our Father has taken care of them through the long winter. This has been a happy day, because our Father loves us. The thunder is God's voice speaking to us; the lightning his god. "Just as the old Canaanites brought up their sons and daughters in passageways of stone, and reverence for them not too worthy princes, so by having our hearts full of loyalty to the great King we shall influence our families. Let our daughters see what a grand thing it is to come to the chief amongst ten thousand" by the style of our clothes, the ring of our voices, the carriage of our heads, by our talking, by our acts.

And if our little ones ask us, "How are we to know we have come to the King, mother?" make answer: "When my girflies are gentle and sweet and know they are in the outer court of the palace, for "When you come, He makes your face so fair, Your friends are glad, and say: 'The King is there.'"

But there is another and deeper, and fuller, and wider way (for us) of bringing our little girls unto the King's palace. It is an arrow, though sharpened by love, that the post gives us as a token. Open in the hands, sometimes, covers the letters, but that our post-precious nurseries are to prepare for a change of life, for the King is not willing that they should be so far from Him any longer. And oh! before the "exceeding glory" we have to still the trembling lips and nerve the shaking hands. We know—

"Snowy brows, no care shall shade them, Bright eyes, tears shall never dim, Rosy lips, no time shall fade them, Jesus calls them unto Him."

But we cannot help grieving—

"All adown the mighty ages, All adown the solemn time, They have taken up their homework Marching on toward that deeper home. Where the watching, waiting angels, Lead them from the shadow dim, To the brightness of His presence, Who calls them unto Him."

"There is always something pathetic about a soul that stands upon the borderland of a great, new country beyond. There is always something that strikes a tender ley about a life that has lately been, or is soon to be, merged into the fuller life of immortality."

So writes one who has stood there with the little ones, who has seen the expression our attitude towards the "beautiful gate." They have so lately come—fresh, sweet, and beautiful—from the Father's hand. We do not know how close they may be standing to the many mansions, or how soon they may be called over the border line. Time has not yet obliterated marks of their nationality. Innocent trust will still abide, are fully developed in the little ones who have come from a far country, and have not yet learned the shibboleth of earth. "The silver bells of youth are not yet jangled out of time. Blue eyes are still blue with the glory of the heavens they lately passed through."

I think only a mother can realise the way in which she mothers, approaches, and touches, those who have come from and are going to the King.

"I appeal to all who bear babes—in the hour, When the veil of the body we feel Paschal light—whom we hope to see The motherhood's advent in power."

Are we doing all we can to prepare our daughters for the destiny in store for them? Bunyan has placed his land of Beulah at the end of pilgrimage. Rather, I think, it should be put in that part of life when the children are children still. For here alone are the pilgrims' chambers perfumed with camphire and nard, saffron and aloes. With all trees of frankincense, myrrh, and aloes, with all the chief spices. Here we anoint their bodies for that passage over the river which may be so near. For though—

"No rush of the mournful waves
Breaks on the waters of the sea."

To tell us, when Life is strongest, That Death draws near.

Yet from statistics I know that nearly half of the world's population go back to the King in childhod. Do we not, therefore, owe it to our own girls to make it possible for them to be ours to work the clothing of the King's daughter with wrought gold and fine needlework. Only a little while to act the part of Fregel, and see that all things necessary for their purification are theirs (Esther i. 6). Only a little while to strike their lives in the key which is set to the songs of immortality. Let us remember if we think there is nothing to do. The white bodies of the King's daughters must, we say, be kept pure and clean and wholesome. Oil of myrrh and sweet odours we may hopefully put in. Let us dress them in fine linen, tucked and embroidered and frilled and stitched. We feed them on the finest of wheat flour and best of fruits. We make the pillars of the house they live in of the silver of love, paving it with gold and covering it with purple. We tend them carefully in sickness and health, in poverty and wealth. Do we equally, carefully and systematically make this life only a part of that other life they may any day be called to begin? Not patching this old cloth on to a new garment. Not making it an exchange of old lamps for new ones. But weaving the fabric all of one piece. Letting the same thread twine and intertwine until there shall be nothing to change if the Master's voice came to-day: "Bring her to Me."

We so carefully train our maidens for the life-work we think they have before them. The embryo schoolmarm takes a degree after years of study. The musician spends hours at the piano. The artist learns anatomy and color and form. So, just as diligently our little girls should be trained for eternity. Other careers may be before them. Eternity must be before them.
WHAT TO EAT AND HOW TO EAT IT.

HERBACEOUS MEATS AND FRUIT DIETS.

In that solemn hour—when with the King's daughters we stand on the borders of the Kingdom, waiting for the last message from the King, when we feel the weight, the power, or talents, or beauty of the one going from us. We shall only remember with joy that they are ready. "Death must be good to those that do good—because it crowns man's evolution on the planet earth," Lord, we can trust Thee for our Holy Dead.

"With joy and gladness shall they be brought and shall enter into the King's Palace." It is not so here. Jesus Himself wept at the grave of Lazarus. They leave such a blanket in the home, those King's daughters—like a robe of Ophelia. Such empty arms, such an aching heart. Our children have walked out into the great mystery. Fearless because they trusted in Him who was their guide even through death. We are left to face bereavement and sorrow. We can only face it by entering into the fact that the King's daughters are with the King in the Palace of the King. They are gone a step further on the road they have walked here; they are on one side of the door, we on the other. Jesus, who first set this little child in our midst, now calls her to go a step further to Him. Abiding places are prepared in the many mansions of the King's Palace.

"Shall not you and I try to take up the closing verse of the psalm—"

"Therefore shall the people give thanks unto Thee, world without end." The King has loved our Esther, the little girl, and has called her out for Him—above all the women—she has obtained grace and favour in His sight more than all the virgins. So that He has set the Royal crown upon her head and given her a long life—even for ever and ever.

"O green and glorious! O herbaceous treat! I would tempt the dying anchorite to eat." Sydney Smith.

It is not often in our own immediate times that we find so eminent a person as the Pope of Rome taking the somewhat humble subject of food and diet into serious consideration; his poem, lately published, "In Praise of Frugality," presents to us so fine a picture of true epicureanism and catholic taste, that I can give permission to quote some of its lines here.

"What? Diet lends the strength to Life, and frees
The dower of health from each malignt disease!
The good Ophelus, pupil from of old
And follower of Hippocrates, has told, Rating base glutony with anxious air,
He thus laid down the law of Frugal Fare—"

Neatness comes first. Be thy spare table bright
With shining dishes and with purple napkins,
Be thy Chianti unadulterate,
To cheer the heart, and raise the spirit's weight.
Yet trust not much the rosy god—in fine
Be sure that you put water to your wine.
Pick'd be thy dainty, and pure thy home-made bread,
Thy ments be delicate, and dairy-fed;
Tender, nor highly spiced thy food; nor tease
Thy taste with sauces from Zeegan seas.
Fresh be thine eggs, hard-boiled, or neatly raw,
Or delicately poached, or simply served en plat,
'There's wit in poaching eggs,' the proverb says,
And you may do them in a hundred ways.
Nor stun the bowl of foaming milk that quench.
The infant, and may serve the senior's needs.
Next on the board be Heaven's gift—money-placed.
And, sparing, of Hylbean nectar taste;
Pulses and salads on thy guests bestow—
Even in suburban gardens salads grow—

And chosen fruits—whate'er the times afford,
Let rose-red apples crown the rustic board.
Last comes the beverage of the Orient she,
Mocca, far-off, the fragrant berries bore.
Taste the dark fluid with a dainty lip,
Digestion waits on pleasure as you sip.

It is to Mr. Andrew Lang that we owe the translation of the Latin words.
A meal so rare as this puts our tables to shame, and the French, in their eulogium, literally, we can bear in mind that "even in suburban gardens salads grow;" we can have "pure home-made bread," "tender" meats, and the bowl of "foaming milk." Above all, we can bear in mind that "neatness comes first," and look to it that our table is faultlessly set, shining, sparkling, and cheering. Rare fruits should be beyond our power or desire; fragrant coffee is accessible to all.

The more substantial articles of a herbaceous dietary we have considered in our study of French vegetables, but as the term herbaceous includes also the foliaceous parts, shoots, stems, etc., of plants, we take these separately. On account of their succulence, which is a small part, proportion of nutritive matter, but they are exceedingly valuable on account of their anti-acetic properties, for their salts, and for the sake of the variety they give to our bills of fare.

Gardens are continually adding to our list of edible plants by various methods of cultivation to which a land cultivated state would have been coarse and unpalatable are rendered, by rapid growth and partial exclusion from light, delicate, fine-flavoured, and digestible.

One of the most patent instances of what cultivation can effect is illustrated by contrast the blanched and succulent dandelion that is grown for salat, and the rank, dark-green rooted dandelion of the dandelion of the bejogger.

To the large and constant sale of sorowriss and small cress with mustard, Londoners owe much of their comparatively good health.

Celery is yet another instance of a flake kind. The common or wild celery is a native of Britain, and in its original form it grows in marshy places and by the side of ditches. In this form it has a coarse, rank, bitter taste, and rather objectionable smell. The know-

ledge of how to cultivate for table use came to us from India about a hundred and seventy years ago. By excluding the light, allowing only the leaves to remain above ground, the stem grows white, and acquires a certain amount of flavour, and tender enough for eating in their raw state.

Under the name of lauer we have various kinds of seaweed which are all good for food, indeed so good (according to Dr. Letheby) are they, that he urges the advisability of extending the use of a so valuable and abundant food. As it contains about sixty per cent, of starchy matter and sugar they are amongst the most nutritious of vegetable substances. By the peasants of the coasts of Ireland and Scotland they are much used, as after soaking them in cold water for several hours, they are stewed in milk until tender, or they are pickled. The Chinese eat them fresh, making a pleasant jelly from them.

Of lettuce and endive and cress—commonly called "small salad"—we have a goodly variety; in this class we should keep in mind the French salad, which we know as "corn salad." As this last is very hardy it stands out all winter, and in very early spring, before lettuce of any kind is available, it is an indispensable. Lettuces are chiefly valuable for their cooling properties; they are excellent for the skin, easy of digestion, and have a slightly soporific effect on the system generally.

After a meat course, or salad comes most acceptably to the palate, and not only nourishing but healthful, from our point of view. With eggs again, as eggs in a minor degree have much the same constituents as meat, salad is the most appropriate accompaniment we can have.

It is a mistake to let the dressing of a salad overpower the flavour of the herb or extinguish its character. The celebrated recipe of Sydney Smith, from which we quote in our headline, is altogether too elaborate for all but the gourmet. The simple mixture of oil and vinegar, pepper, mustard and salt, with or without the hard-boiled yolks of egg is quite sufficient for every-day needs. It would be well if salade replaced pickles on the working man's table much oftener than they do. The preparing and dressing of a salad is not beyond the skill and the capabilities of the most illiterate housewife, but, alas! the trouble that must be taken is a great deterrent.
